

Practical Teaching Strategies to support the CCSS in Mathematics

If you are looking for practical strategies to help your students become more confident in tackling math problems that will be on the Common Core state assessment in the spring of 2015, then this is the session for you.

During this session, participants will:

1. become familiar with the eight mathematical practices, which accompany the standards for mathematical content in the Common Core State Standards.
2. participate in a variety of grade-level activities to experience lessons which embed these practices and to observe modeling of them.
3. become familiar with practical teaching strategies while actively collaborating with colleagues.
4. discuss implications of implementing the practices/standards.
5. find and/or create lessons that embed these practices and are aligned with the most essential Common Core standards.

✧ *****We are asking that all participants bring three to four standards they are currently working on or will be working on next for the specific curriculum they are teaching.***
